**Version:** 1.0  
**Description:**

Hello,  
This is just a test to see what elements are eliminated whenever a process from Bizagi Modeler is imported into Bizagi Studio.  
Bizagi is an outstanding BPM platform, but this issue needs to be addressed; Users are expecting that everything they do in Bizagi Modeler will import into Bizagi Studio. A great deal of time may be spent on elements that will simply disappear once the process has been imported. This is surprising and unsuspecting functionality.

**AFTER:**

You can see all of the elements that have been eliminated. The main one that concerns me is how the "3.Task Description" gets chopped down to only 40 characters – I find this to be very limiting. However, if at least, "4.Annotation", or, "7.Formatted Text" would import into Bizagi Studio, I could use them as a "work around" to provide the descriptive text for each task that I want to provide. I previously posted on the Task Name issue here: <http://feedback.bizagi.com/suite/en/topic/larger-task-names-when-i-import-my-model-the-task-name-is-cut-short>.

I really hope that this will be addressed in future versions, especially (and chiefly) the issue of the short Task Descriptions (#3).
